Lucknow, India | +91 8299483299 | sankalp.mehrotra2@gmail.com | LinkedIn

Professional Summary

MBA candidate aspiring to build a career in **Product Management**, with **1 year 7 months of experience** in **B2B sales** and **dealer relationship management**. Experienced in **customer insights**, **sales data analysis**, **pricing**, **cross-functional coordination**, and **market-driven decision-making**. Proven ability to manage **80+ dealer accounts**, develop **customized sales proposals**, and identify opportunities through **data-driven analysis**. Looking to leverage customer and business understanding to contribute to **product strategy**, **customer-centric solutions**, and **product growth**.

Experience

Sales Associate Jun 2024 – Dec 2025

Midland Agro Pvt. Ltd., Lucknow

- Managed and grew **B2B relationships** with **80+ dealer accounts**, strengthening **customer retention**, **repeat-order cycles**, and **brand loyalty**.
- Prepared and presented **B2B custom pricing quotes** and **sales proposals** for corporate clients, supporting **pricing discussions** and **order conversion** for **100+ units**.
- Coordinated with warehouse and logistics teams for **order fulfillment** and **supply chain coordination**, ensuring accurate, **on-time delivery of bulk orders**.
- Performed **sales data analysis** across dealer accounts to identify **top-performing products** and underperforming territories, supporting territory management and **targeted sales strategies**.

Projects

Personal Portfolio Website [Click Here](#) Aug 2026

- Designed and built a **personal portfolio website** showcasing professional experience, skills, and projects using **AI-assisted development tools** and **technical mentorship**.
- Leveraged **AI tools** for rapid development, troubleshooting, and foundational web development, including **responsive design**.
- Applied modern **AI-assisted development workflows**, demonstrating **adaptability** and **cross-functional learning** beyond a traditional sales skill set.

KERS in a Bicycle Using a Flywheel Sep 2020 – Apr 2021

College Project

- Designed and developed a mechanical **Kinetic Energy Recovery System (KERS)** for a bicycle using a **flywheel-based energy storage mechanism**.
- Engineered a mechanism to **capture kinetic energy** during braking/deceleration and store it as **rotational energy** in a flywheel.
- Implemented an **energy release system** that transfers stored flywheel energy back to the **drivetrain** to assist **acceleration**.
- Improved overall **bicycle efficiency** by reducing **energy loss during braking** through **mechanical energy recovery**.
